About Us

Founded in 1998 in Shanghai, Jinglin Packaging Machinery Co., Ltd is a company that integrates R&D, manufacturing, sales and service of metallurgical special packaging equipment and complete solution provider.

In 2017, we established Jinglin Packaging Machinery (Changzhou) Co., Ltd in Changzhou and was recognized as a high-tech enterprise in 2020.

With more than 20 years of innovation and development, we have extended from single machines to high-end complete packaging equipment and have realized a series of solutions for the metallurgical industry. We have achieved full coverage of products in the industry. To empower the metallurgical steel industry, non-ferrous metal and other industries to realize intelligent and digital transformation as soon as possible, and make a contribution to the technological innovation and high-quality development of the metallurgical packaging equipment industry.

Industry Solution

Jinglin dares to be the first, relying on scientific and technological innovation to achieve many domestic firsts.

- The first fully automatic digital slitting and narrow roll packaging line
- Fully automatic slitting and packaging line for aluminum rolls

2021

- Automatic Copper Wire Coil Packing Machine

- The first intelligent / full element stainless steel coil packaging line
- Automatic alloy steel bar packaging line

2022

2020

NOW

- Established Jinglin Packaging Machinery (Changzhou) Co. Ltd

2017

2019

- Automatic copper coil packaging line

2018

- Bar strapping and wrapping machine

2013

- Automatic steel pipe stacking and packing machine

2015

- Steel strip multi-roll welding line

2016

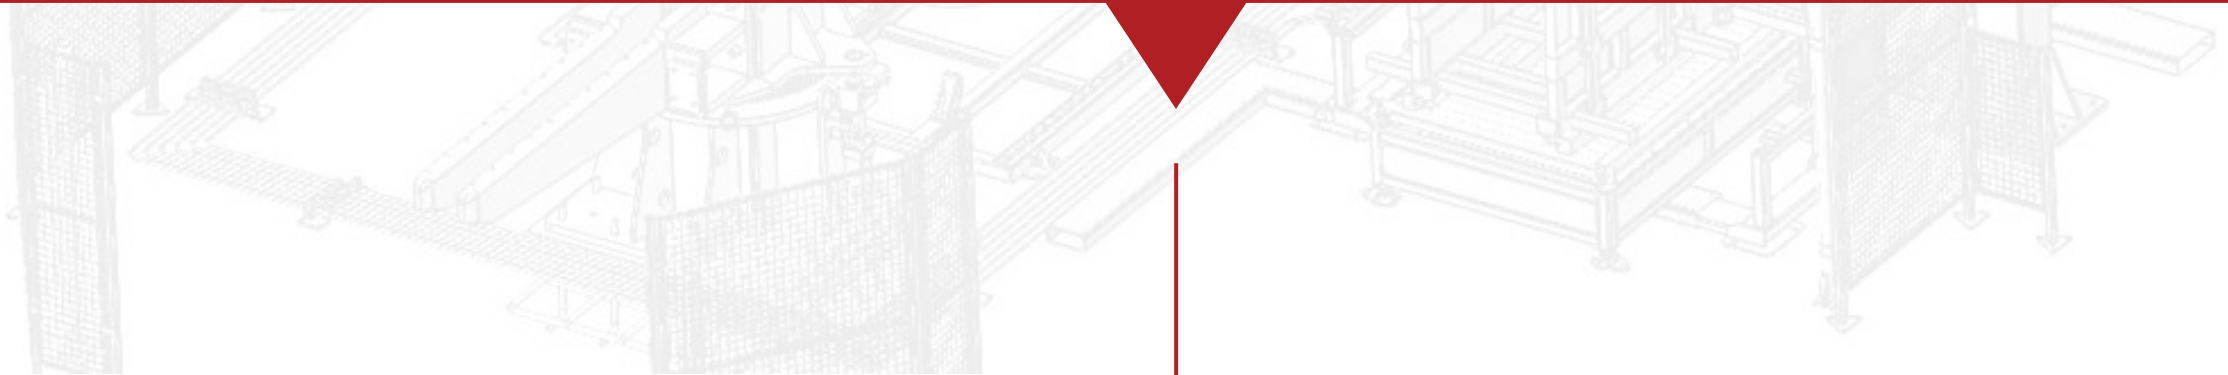

- Automatic steel wire compressing and coring wrapping machine

Expert

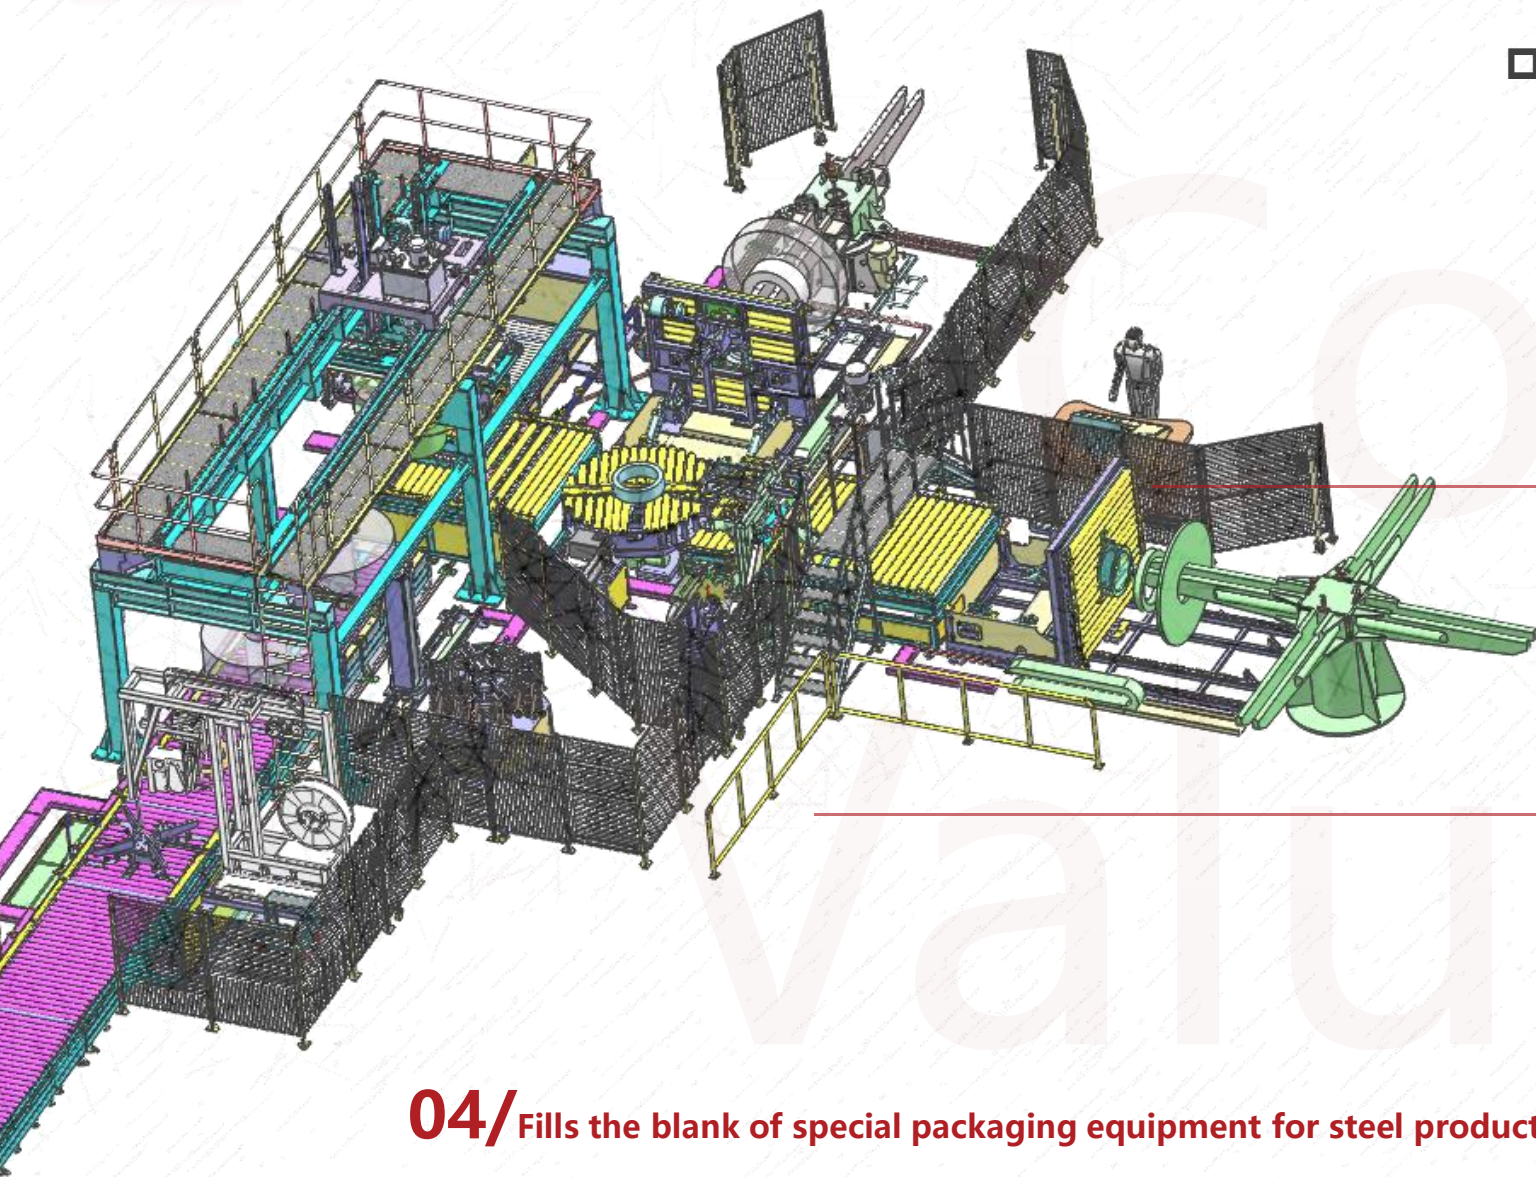

Over 100 patents for inventions and utility models have been granted

Pending Dozens of licenses

For metallurgical and non-ferrous metal industries to solve the "last mile" problem of back-end automated packaging and flow of products

Take Baosteel's "slitting and narrow roll packaging line" project as an example

01/The first one in China can complete information interaction with Baosteel Industry and Trade System in the packaging process, and successfully realize the challenge of automatic and manual switching of digital information.

02/The production process reduces the number of personnel transfer and personnel involvement, reduces labor intensity, can effectively avoid personnel injuries, ensure safe production, improve quality and increase efficiency.

03/The whole packaging process is unmanned, and the packaging quality is always the same, which greatly reduces the rate of defective products.

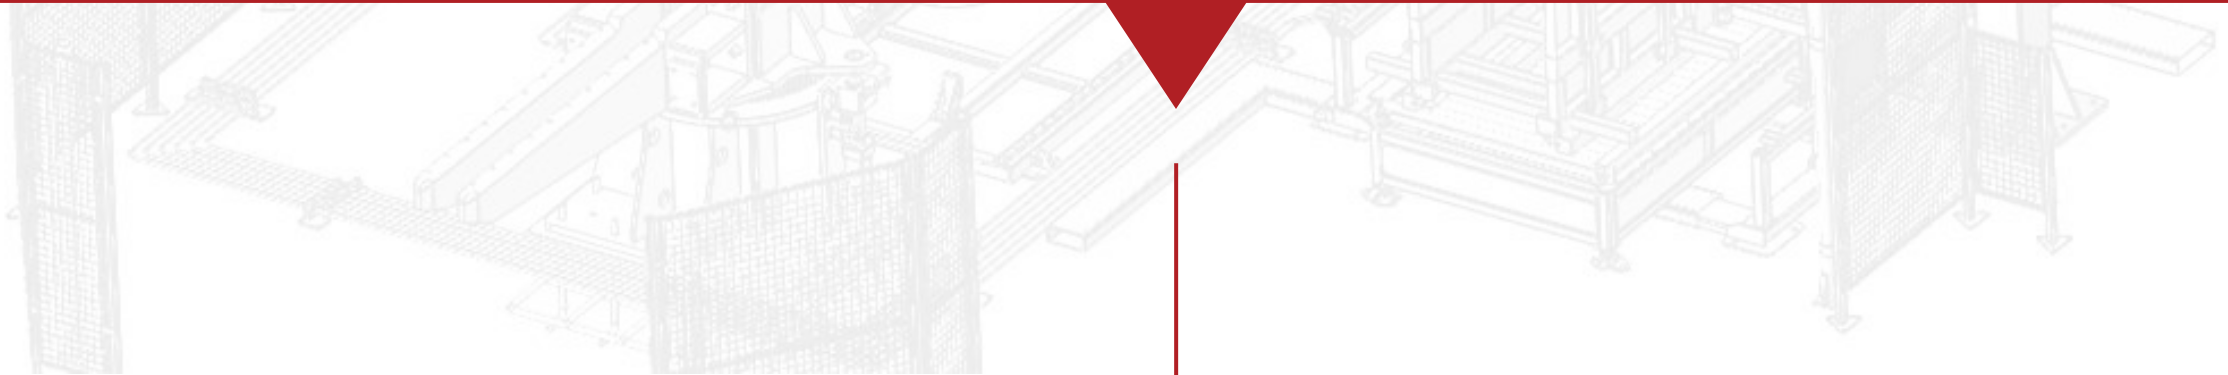

04/Fills the blank of special packaging equipment for steel products in China, changes the previous situation of passively choosing imported equipment, and creates a new pattern of domestic metallurgical high-end packaging equipment industry.

Global Market

Technology leadership

Jinglin Packaging:
Insist on technological innovation,
has reached the international
advanced level of the same industry

Price Advantage

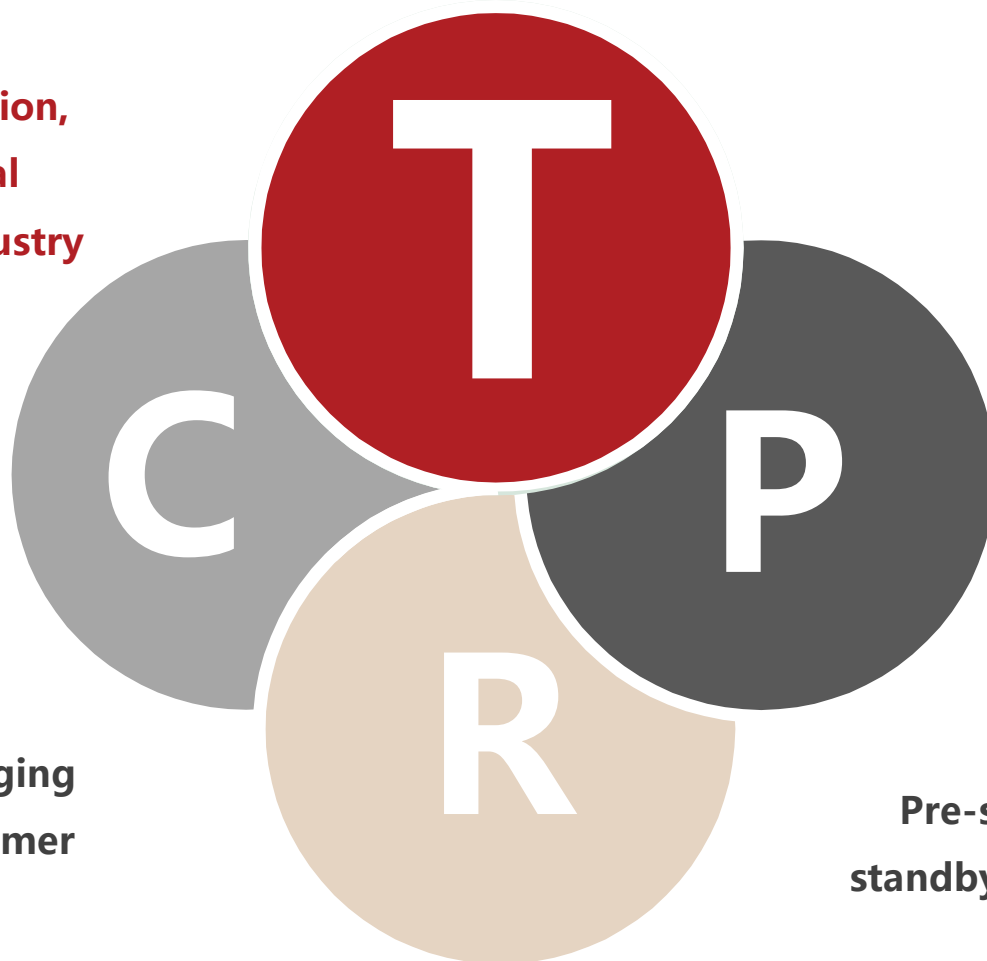

Compared with similar
equipment of European and
American brands have
obvious price advantages

Customized Solution

Customized automated packaging
solutions to meet actual customer
needs

Quick Response

Pre-sales and after-sales 24 hours
standby for an extremely fast response
12 hours must reach
